Dear Jane,

How do you save a species like the swift fox when it is gone from 90% of its historic range and at risk of disappearing forever? Through state-led conservation efforts.

State wildlife programs helped the imperiled swift fox recover across the Great Plains down through Texas. **It is successful outcomes like these that the Recovering America's Wildlife Act of 2017, which would significantly expand state wildlife program funding, is hoping to repeat for hundreds of species headed toward extinction.**

[Please send a message to your members of Congress urging them to throw a lifeline to all species in crisis by supporting the Recovering America's Wildlife Act of 2017.](#)

Under our current system, there simply isn't enough funding directed toward wildlife conservation. Yearly funding for state level efforts right now is only \$60 million—less than 5% of what is necessary to help our nation's imperiled species recover.

The Recovering America's Wildlife Act changes that. The legislation would direct \$1.3 billion each year straight to State Wildlife Action plans to address severe wildlife conservation challenges such as habitat loss, competition from invasive species, unintentional trapping and poisoning, and more.

[Helping species in crisis is a race against time. Please take action today. Ask your members of Congress to co-sponsor this much-needed wildlife conservation funding bill.](#)

The strength of your voice can help the swift fox always run like the wind in the open prairie and prevent hundreds more of America's wildlife species from disappearing forever. Thank you for taking action!

With much appreciation,
